

COIN COUNTING AND SORTING MACHINE

SORTOVIT S 10C

SORTOVIT S 10C

Compact-Class Coin Counting and Sorting Machine for mixed batches of coins, up to 8 denominations, up to 2,800 coins per minute. Equipped with Single-Stop unit, Standard foreign coin off-sort feature, large coin tray, automatic coin feed and mixed coin pre-count feature.

SORTOVIT S 10C

With the **SORTOVIT S 10C** up to eight coin denominations can be processed.

A foreign coin off-sort feature is standard. All known foreign and false coins are detected and off-sorted.

The machine is equipped with a Single-stop feature. It enables the operator to pack the sorted coins one after the other into coin bags or tubes in a second step. The stop amount is freely programmable.

The **SORTOVIT S 10C** has a standard RS-232 Interface to connect to a printer or PC.

We have made a number of fundamental changes to our operating concept and have adapted it to suit the operators needs exactly. The new coin outlets are suitable both for coin bags or coin tubes.

A 10 key keyboard is available as an option.
